SUMMARY

Frontend Engineer with 5+ years shipping data-heavy web products across PropTech, B2B SaaS, and e-commerce. Expert in React/Next.js and Vue/Nuxt with TypeScript; works across the stack when needed — REST APIs, schema design, CI/CD, and AI-powered features. Top contributor on a production real-estate platform, owning features from design to release.

TECHNICAL SKILLS

Frontend: TypeScript, React, Next.js (App Router, SSR/SSG), Vue.js, Nuxt.js, Mantine, Tailwind CSS, Zustand, Pinia, Redux

Backend (working knowledge): Node.js, Fastify, REST API design, MongoDB, Elasticsearch, Python (FastAPI, LangGraph), OAuth 2.0

Product UI: Multi-tenant RBAC, auth (JWT/refresh token), document upload/preview/versioning, notifications & activity feeds, dashboards, AI-feature UI (streaming states, source-backed results)

Performance & SEO: Core Web Vitals, code-splitting, caching, image/font optimization, schema.org structured data, technical SEO, accessibility

Tooling: Git, Docker, CI/CD (GitHub Actions, Helm/GKE), Vite, Storybook, Agile/Scrum

PROFESSIONAL EXPERIENCE

MOSO — Product Engineer

04/2025 – Present

Real-estate marketplace (moso.vn). Top contributor across 9 repos: consumer web, admin/CRM, backend, mobile, and AI services.

- Own frontend delivery of moso.vn (Next.js 15, TypeScript, Mantine): listing search, sale/rent posting flows, agent directory, project pages with map clustering, and a config-driven landing-page engine.
- Doubled Lighthouse performance score (30 → 60) via image/font optimization, server-side caching, and route-level code-splitting, improving Core Web Vitals on mobile.
- Built the technical-SEO layer — schema.org structured data, dynamic sitemaps and metadata, AI-crawler policies — the foundation for organic and AI-driven acquisition.
- Shipped AI features end-to-end: AI property-finder chat and AI search on web, plus a Python LangGraph/OpenAI agent service (tool suite, MCP server) with Helm/GKE CI/CD.
- Own core admin/CRM modules — transaction verification workflows, telesale, HR, dashboards, analytics — and implemented multi-tenant RBAC spanning the UI and the Fastify/MongoDB/Elasticsearch backend.
- Built document/media management for listings and transactions (upload, in-browser preview, versioning), plus backend schemas and cron pipelines: auto-publishing, notifications, GA4 ingestion.
- Delivered cross-platform mobile features (React Native + Zalo Mini App monorepo) with CI for OTA updates, and built a greenfield video platform (Next.js) from scratch.
- Authored the team's frontend architecture standard (stack, folder structure, API and i18n conventions) and AI-assisted dev tooling, adopted as the canonical team reference.

Ahasoft — Frontend Developer

03/2024 – 03/2025

- Built UI for a beauty-salon CRM serving 10,000+ shops in Korea (Vue.js, TypeScript): complex data tables, booking calendars, and high-conversion forms.
- Delivered notification/activity-feed UI and role-based permissions for the multi-tenant CRM, keeping each tenant's data and access isolated.

OKXE — Frontend Developer

04/2022 – 10/2023

- Developed core features for a motorcycle e-commerce platform with 1.5M+ users and 2M+ products (Vue.js, Vuetify).
- Streamlined frontend logic and deployment workflows, cutting release time and production bugs.

Sutrix Solutions — Frontend Developer

11/2020 – 03/2022

- Built responsive, cross-browser interfaces for enterprise clients: Nissan e-commerce and product-customization portals (React), and Philippine Airlines flight-booking UI.

EDUCATION

Hoa Sen University — B.S. Information Technology (in progress) 09/2024 – Present

VNUHCM – University of Science — College Diploma, Information Technology 09/2017 – 09/2020
